

Practical Intermodal Communication

All PIC solutions are provided as Software as a Service, available on the Internet on a licensing basis and charges based on actual usage. The solutions can be accessed from anywhere, including from mobile app for smartphones and tablets, providing PIC users with flexible tools for their daily business.

## Mobile access to PIC

Being part of the intermodal chain of transport - whether you are a local liner agent, terminal operator, service provider, truck driver or customs authority - you need to have access to all relevant information regarding transport and handling of cargo.

Our system PIC collects all information on transport and cargo and makes it available to the parties in the intermodal chain of transport. By providing a shared information platform, PIC binds all parties in a transport together in an information network. PIC manages and controls the flow of information - from the time the cargo leaves the consignor to the time it arrives at the consignee.

The PICmobile application serves as a mobile interface to PIC. We are confident that the mobile apps for Android and iPhone will give our customers several benefits in terms of mobility and flexibility.

PIC customers can enter and draw out real-time information from PICmobile in different contexts and for different purposes: tracing equipment, creating bookings, showing stock, reporting services, verifying bookings, showing bookings and much more.

As a PIC customer, you need to have registered access to PICmobile. The application is free to download and install, however, transactions and special modules are paid at ordinary rate. The PICmobile app can be downloaded at the Android Market and from the Apple App Store respectively.

For registration of access or more information on PICmobile, please contact PICsupport at +45 8730 8020 or support@picit.dk.

Software as a Service for managing:

-  Intermodal Terminal and Depot Operation
-  Equipment Maintenance and Repair Estimates
-  Train Transport and Rail Wagon Operation
-  Customs Documents and Authority Control
